IVECO ORIGINAL PARTS: BORN PERFECT.

IVECO WIPER BLADES.
IF THEY'RE GENUINE, YOU CAN SEE IT!

IN TERMS OF SAFETY, WE GIVE YOU THE MAXIMUM.

If you want peace of mind and to drive safely in all weather and road conditions, your vehicle has to be in perfect shape - 100%. That's why it's **always important to choose genuine parts, the only parts that can guarantee the performance of your vehicle and provide all the safety you're looking for.**

ORIGINAL WIPER BLADES: 100% QUALITY AND VISIBILITY.

The efficiency of wiper blades is vitally important. They have to remove rain and snow perfectly from the entire surface of your windscreen, be able to withstand extreme temperatures (from -30° to +80° C), the mechanical stresses of wind and the weight of snow and ice. They have to be resistant to organic and inorganic deposits and aggressive substances, be able to remove dirt and give a clear field of view in all weather conditions. All these requirements are guaranteed by Origin 100% Iveco wiper blades.

...The best thing is to check your blades regularly and change them straight away for original Iveco wiper blades if they're worn or degraded. It's a question of safety!

CHECK AND CHANGE YOUR BLADES REGULARLY - THE RIGHT WAY TO BE SAFE.

Wiper blades must be in perfect condition at all times for optimal vision.

They perform at their best in the first 6/8 months - about 100,000 wiping cycles - but should be checked periodically because of the kinds of severe stress they are subject to. **That's why Iveco recommends changing them at least once a year.**

The rubber on the blade is the part most subject to deterioration. It can be cracked and split by dirt on the windscreen, deformed by prolonged exposure to heat and hardened and made porous by UV rays and ozone.

Freezing weather can tear the rubber off. Result: micro-streaks are formed on the windscreen, the wiper jumps and works noisily and the blade dries badly and unevenly. Dust and chemical action by acids and bases can corrode the frame and seize up the joints, and rusty water can damage glass or vehicle paintwork. The best thing is to check your blades always. **And change them straight away with Originals if they're worn or degraded. It's a question of safety.**

NEW BLADE

WORN BLADES

ORIGINAL WIPER BLADES

HIGH QUALITY RUBBER ENSURES
STREAK-FREE WIPING.

ANTI-WEAR RUBBER
PROLONGS BLADE LIFE.

OPTIMUM, CONSISTENT PRESSURE
GUARANTEEING **BETTER VISIBILITY**
AND QUIETNESS IN ALL CONDITIONS.

EXTRA THICK METAL FRAME GIVES GREAT **RESISTANCE**
TO CORROSION AND SCRATCHES.

ORIGINAL BLADE

COUNTERFEIT WIPER BLADES

POOR QUALITY MATERIAL IMPAIRS THE WIPING,
LEAVING STREAKS AND MARKS.

SIGNIFICANTLY SHORTER LIFE. **NEED TO BE CHANGED**
MORE OFTEN, WHICH **AFFECTS YOUR COSTS.**

INCONSISTENT DISTRIBUTION OF PRESSURE ON THE
GLASS MAKES THE BLADES **MORE NOISY** AND LEAVES
STREAKS ON THE WINDSCREEN.

FRAME **MORE PRONE TO CORROSION**
AND DETERIORATION.

COUNTERFEIT BLADE

TECHNOLOGY AND AERODYNAMICS. THE ORIGINAL FLAT BLADES.

New style, new design, new aerodynamics and all the Origin 100% Iveco warranty. Flat Blades are the most innovative version of windscreen wiper technology.

DAILY: PN 500050086 STRALIS: PN 500050085

The new "Flat Blade" technology, with no joints and with the metal structure integrated into the body of the blade, reduces every single vibration to a minimum. The blades are extremely quiet thanks to their incorporated wind spoilers and aerodynamic, compact shape, and offer very little wind resistance, ensuring effective wiping at all speeds.

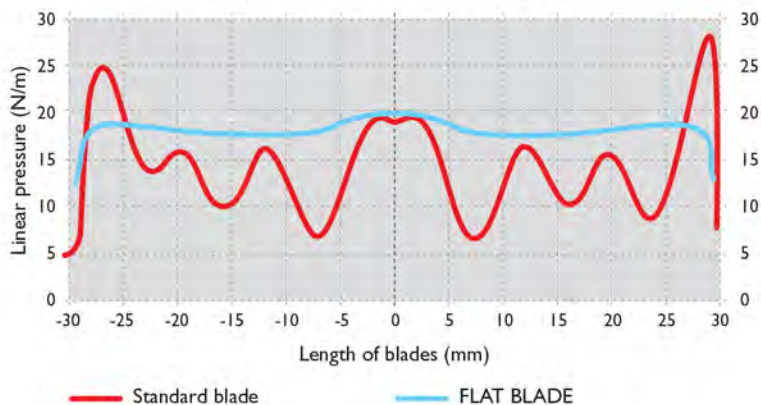

Iveco Flat Blades, tailored to fit any windscreen, adhere to all points on the glass with optimal, constant pressure distribution.

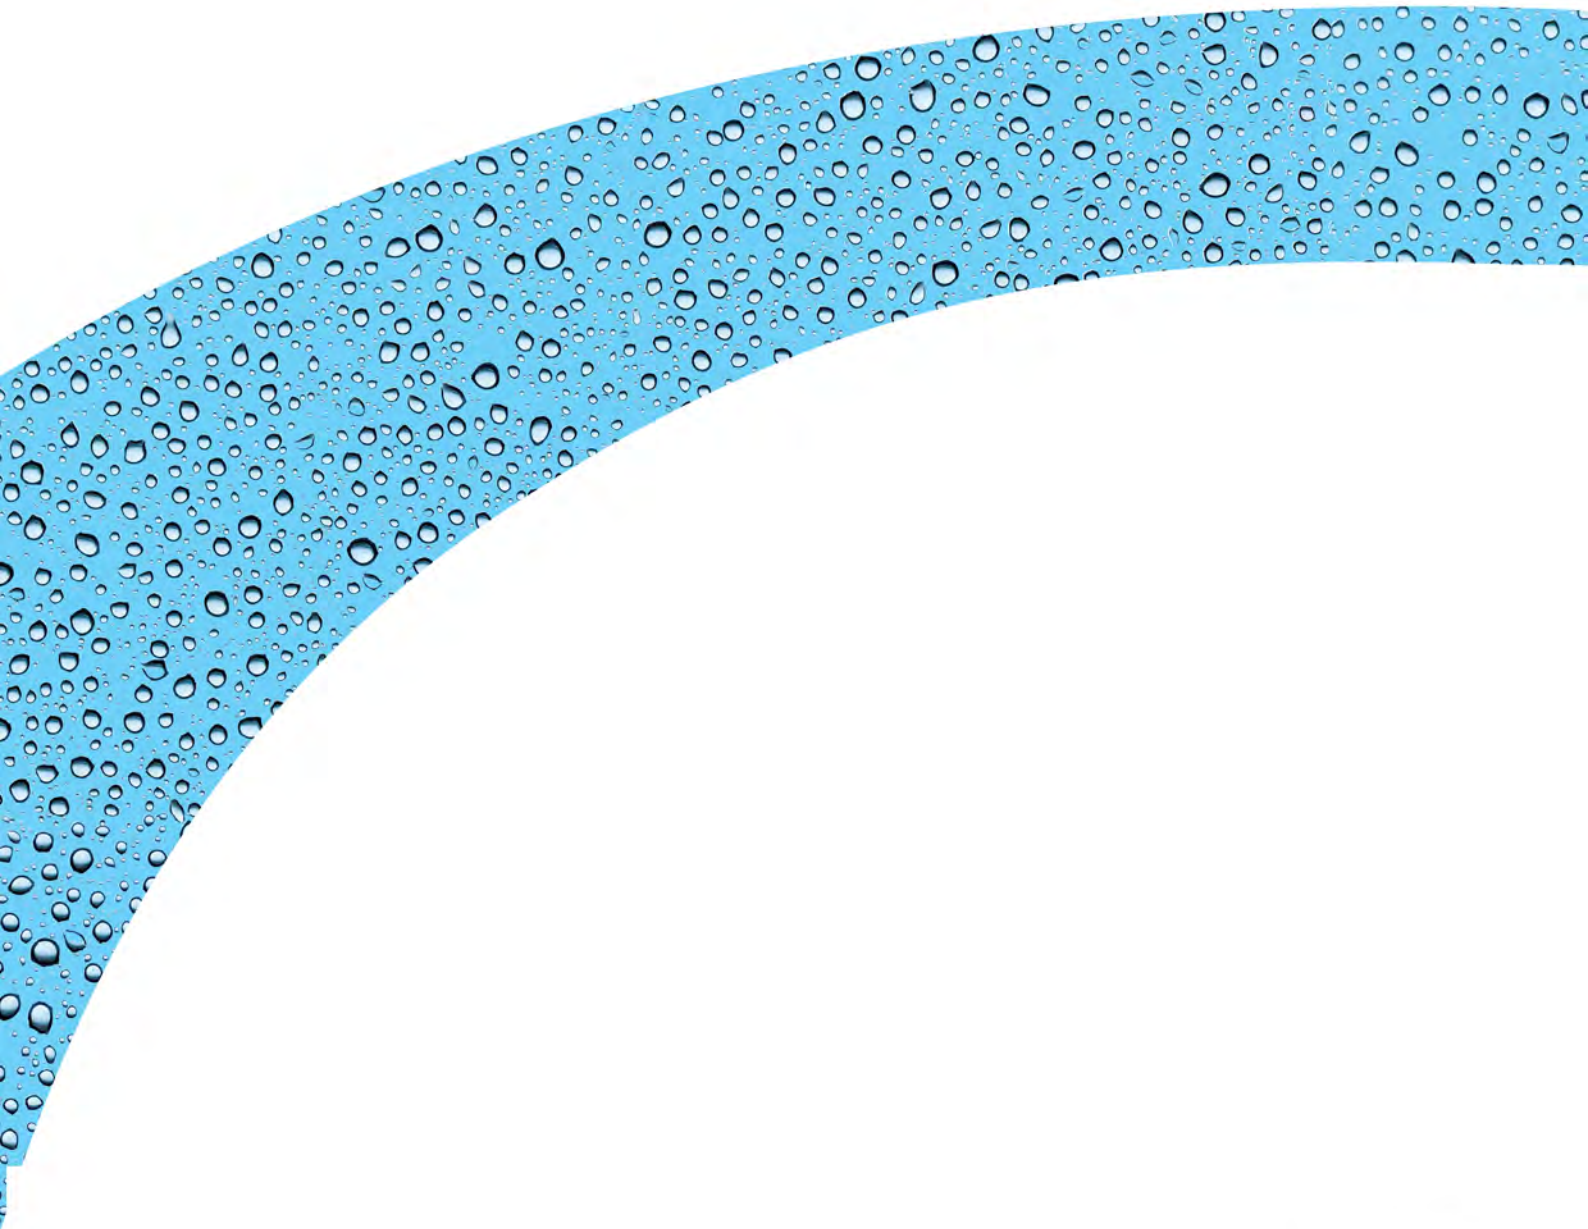

Result: excellent wiping quality at all times, longer life and no scratches.

COMPARISON OF AIR PRESSURE DISTRIBUTION BETWEEN A STANDARD BLADE AND A FLAT BLADE.

The blade structure, with no joints and no metal superstructure, ensures maximum frost resistance and the built-in adapter simplifies installation, even when replacing standard blades.
