## **IVECO previews new Daily 4x4**

*IVECO is providing preliminary details of its latest generation Daily 4x4 cab chassis model, ahead of the vehicle's proposed official Australian launch in the second quarter of 2023.*

A favoured platform for expedition motorhomes, mining, exploration, forestry, emergency service work and similar applications that require extreme off-road ability, the new Daily 4x4 retains the preceding model's capabilities in this area, while introducing new levels of refinement.

The new model which is available in single and dual cab variants with 7t GVM and three wheelbase options, introduces independent front suspension to improve ride dynamics. Rear suspension remains parabolic three-leaf, ensuring the vehicle continues to offer generous load carrying abilities.

Another important addition in the new release, is availability of IVECO's market-leading 8-speed full automatic transmission. As well as providing a more relaxed driving experience, in demanding off-road conditions the automatic allows the operator to keep both hands on the wheel and better focus on negotiating obstacles without having to worry about changing gears.

The full automatic provides superfast gear changes and offers seamless integration with the truck's Euro 6, 3.0 litre turbodiesel engine, resulting in a flat torque band and extremely efficient use of the powerplant's 132kW (180hp) and 430Nm. A 6-speed manual transmission continues to be offered for those who prefer to self-shift.

These concessions to comfort and driveability don't mean that the new Daily 4x4 has gone soft though.

As standard, the new models feature centre, front and rear differential locks to provide high levels of traction off-road. The transfer box also has a PTO option, allowing power delivery to a broad range of

ancillary equipment, from tipping bodies, to pumps and drills. An expansion module with CAN open interface allows further customisation of bodies and accessories.

Braking in the new model comes courtesy of ventilated disc brakes all round with ABS and Electronic Brakeforce Distribution, part of IVECO's broader 'ESP9' program which offers a range of active safety equipment including Electronic Stability Program, Anti Slip Regulator, Hill Hold Control and others. The overall safety package also includes driver and passenger SRS Airbags.

A raft of interior cabin changes have also been introduced to the new models to further improve ergonomics and connectivity.

Full technical details on the new Daily 4x4 will be supplied closer to its official launch date.
